VIBRAMECH (PTY) LTD is creating a new position in the Northern Cape Province:

REGIONAL SALES & SERVICE ENGINEER

Vibramech is a South African manufacturer of vibrating mineral processing equipment; designing and supplying customised vibrating solutions to match a client's exact screen, plant and process flow specifications. Vibramech supplies its equipment primarily to mining and mineral processing industries and has extensive experience in gold, diamond, coal, iron ore, manganese, platinum, chrome, nickel, uranium, copper, mineral sands and aggregate operations. Our range of equipment and screens are manufactured in Chamdor, Krugersdorp where our Head Office is also situated. Vibramech has developed a comprehensive range of multislope (or Banana) screens, horizontal and inclined screens, dewatering screens, grizzly feeders, pan feeders, tubular feeders and grease tables, which are operating in processing plants and mining operations.

Visit our website for more information on our products: www.vibramechglobal.com

Required qualifications: Matric and/or Certified Fitter or Boilermaker, coupled with at least 2 years' experience in the manufacturing, repairs and installation of vibrating equipment. Knowledge of SHEQ, applicable mining health and safety legislation, and office administration skills will be an advantage. The ideal candidate will be very familiar with visiting mining operations, and will have exposure to vibrating equipment maintenance as well as mineral processing. Your responsibilities and duties will include, but not be limited to the following:

1. Sales: Your primary function is to liaise with all clients in your region and those allocated to you from time to time (such as project houses, mines, etc.) on a regular and consistent basis. You should demonstrate to them acceptable levels of product knowledge, address any and all queries, resolve complaints in a professional manner within acceptable time periods, assess clients' needs, check spares stock levels and recommend spares purchases, inspect the operation of the products, provide advice to clients, and in due course (in the discretion of management) assist with the compilation of quotations.

2. Engineering: Monitor all field tests and report accordingly. Plan manage and co-ordinate all field service activities together with Head Office. Assist with the inspection and make recommendations where necessary. Ensure that installation teams maintain good housekeeping and complies with all client requirements during installations. Site assessments, maintenance contracts, design improvements, etc.
